PHOENIX, May 6, 2009 /PRNewswire via COMTEX/ -- Broadest Extension of M. D. Anderson Clinical Services Outside of Houston

Today Banner Health and The University of Texas M. D. Anderson Cancer Center announced they will create the M. D. Anderson Banner Cancer Center here. The initiative joins Arizona's leading provider of health care and the nation's leading cancer center to provide patients and their families with an unprecedented level of cancer care in Arizona.

Located at US 60 and Higley Road on the campus of Banner Gateway Medical Center, the M. D. Anderson Banner Cancer Center is scheduled to open late in 2011 and will be anchored by a 120,000 square-foot cancer outpatient center and supported by 76 patient beds on two floors inside of Banner Gateway.

Services will include medical oncology, radiation oncology, surgical oncology, pathology, laboratory, diagnostic imaging, as well as other supportive clinical services. M. D. Anderson will have clinical oversight for all aspects of care delivery.

"This is a great day for all people in Arizona who are touched by cancer," said Banner Health President and CEO Peter S. Fine. "We are bringing patients and their families the latest in knowledge-based cancer care, guided by the top cancer center in the country - M. D. Anderson." For more than 60 years, M. D. Anderson has devoted itself to eradicating cancer through patient care, research, education and prevention at its main campus in Houston, Texas. The renowned center treats more cancer patients, offers access to more therapeutic clinical research exploring novel treatments, and has more National Cancer Institute-funded studies than any other cancer-fighting organization in the U.S.

"We've made great strides in our understanding and ability to effectively treat cancer, however, with our aging population we must be prepared to help many more people fight this disease," said Thomas W. Burke, M.D., executive vice president and Physician-in-Chief at M. D. Anderson. "The M. D. Anderson Banner Cancer Center is a key collaboration in a fast-growing area where we can truly make a difference with leading-edge therapies and prevention."

The anticipated groundbreaking for the M. D. Anderson Banner Cancer Center outpatient center is late 2009 or early 2010. The architectural firm for the project is Cannon Design and the general contractor is DPR Construction, Inc. The center will be modeled after M. D. Anderson's Houston outpatient clinics that feature individual areas for specific cancers. This center represents a \$90 million project that will be funded by nonprofit Banner Health through bonds.

Leading Together

The M. D. Anderson Banner Cancer Center represents M. D. Anderson's most comprehensive extension of its patient care outside of Houston. For Banner Health, the center is its largest collaboration with a partner.

Since the survey's inception, M. D. Anderson has consistently been recognized in the US News&World Report "Best Hospitals" survey as the nation's number one or two cancer hospital. In the past four out of six years this top recognition has been attained, including the most recent 2008 survey.

Banner Health is one of the few hospital systems in the country that is far along in the implementation of digital health records into all of its hospitals. Banner Gateway already features an electronic medical records system and computerized physician order and entry systems. "We believe this capability will offer a strong foundation for excellent patient care in the M. D. Anderson Banner Cancer Center," said Fine.
